# Access Your WHM & cPanel

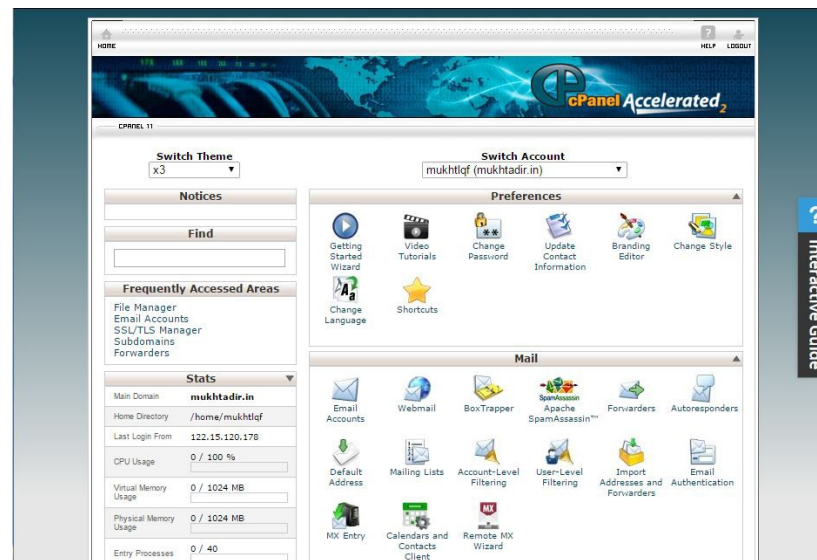

## ▶ Access your WHM Account

Access WHM and manage your customer's website packages.

## ▶ Access your cPanel Account

Access your cPanel account to manage your website.

# Change Name Servers

## ▶ Name Server Details

Required to point your Domain Name to your website or email service

Point your Domain Name to your Hosting package using one of the options below.

### [-] Option 1: Configure your Domain Name to use our Name Servers (Recommended):

- ns1.bh-2.webhostbox.net
- ns2.bh-2.webhostbox.net

OR

### [-] Option 2: Add the following records to your Domain Name's existing Name Servers

mukhtadir.in	IN	A	208.91.198.106
*.mukhtadir.in	IN	A	208.91.198.106
www.mukhtadir.in	IN	A	208.91.198.106
mukhtadir.in	IN	MX	mukhtadir.in

Here, you would find the list of Name Servers you need to set for your domain name

Alternatively, if you wish to retain the Name Servers of your domain name instead of using ResellerClub's Name Servers, you would need to add the DNS Records listed on this page, on your existing Name Servers.

# Brand Your Name Servers

## Add Child Name Servers

www Domain Registration [More](#) March 26, 2014 March 26, 2024 [Renew](#)

- Contact Details**  
Manage contacts associated with this Domain Name
- Name Servers**  
Manage Name Servers that this Domain Name uses
- Child Name Servers**  
Manage Child Name Servers of this Domain Name
- Domain Secret**  
Set the authorization code to transfer the Domain Name
- Theft Protection**   
Protect your Domain Name from theft and accidental transfers
- DNSSEC**  
Protect your DNS data by adding digital signatures

This is not a compulsory step and you can seamlessly use the white labeled name servers for any sites hosted. However, having branded name servers will be helpful in creating a brand for your hosting business. In case, your domain is registered with us, you need go to the domain order detail and click on Child name servers

**Manage Child Name Servers**  
mukhtadir.co.in

	Host Name	IP Address	
1	<input type="text" value="ns.mukhtadir.co.in"/> <small>Eg. ns.mukhtadir.co.in</small>	<input type="text" value="208.91.198.106"/>	<a href="#">Save</a>
2	<input type="text" value="ns.mukhtadir.co.in"/> <small>Eg. ns.mukhtadir.co.in</small>	<input type="text" value="208.91.198.106"/>	<a href="#">Save</a>

[Add More](#)

Child Name Servers are Name Servers which are registered under your Domain Name.

Once registered, you can use these Child Name Servers in turn as Name Servers for registering other Domain Names

Enter the Name Servers and IP address. Once registered, you can use these Child Name Servers in turn as name servers for registering other domain names.

# Brand Your Name Servers

## Add A records

- ✓ **There are multiple ways of obtaining the required IP to create child name servers:** You can ping the primary domain name of your reseller hosting package or ping any one of the white labeled name servers. You can even obtain it by logging into your cPanel or WHM account.
- ✓ **Once you have created child name servers** then you will also need to create corresponding A records from your DNS management interface. If you are managing your DNS from your Reseller Hosting package then you can add the A records by logging into cPanel or by accessing the edit DNS zone feature within WHM.

**Please note:** if you wish to have 4 branded name servers then you will need to create 4 child name servers and correspondingly 4 A records.

# Brand Your Name Servers

Enter your branded Name Servers into WHM

CLOUDLINUX 5.11 x86\_64 standard - bh-2 WHM 11.52.2 (build 4) Load Averages: 10.52 10.34 9.91
