Reloading your Cache

- ▶ From your Reseller Control Panel

Reloading your Cache

- ▶ From your SuperSite Admin Area

The screenshot displays the SuperSite 2 Admin Area interface. At the top, a dark blue header contains the text "Supersite 2 Admin Area". Below this is a light blue navigation bar with several menu items: "Dashboard", "Reload Cache" (highlighted with a red border), "Reseller Details", "Settings", and "Coupon Engine".

Below the navigation bar, the main content area is titled "Reload Cache" in a bold blue font. Underneath this title is a grey header for the "Reload Cache Data" section. The text in this section explains that the supersite downloads pricing, package configuration, and other data for the reseller account and caches it locally. It instructs users to select the data they wish to reload and click the "Reload" button.

At the bottom of the "Reload Cache Data" section, there is a dropdown menu currently set to "All Settings" and a green "Reload" button, both of which are highlighted with red borders.

Express Cart [Go to SuperSite](#)

Hello Maximus! Welcome to our latest power tool — The Express Cart. [Learn More](#) [Give Feedback](#)

This tool is a lighter version of the SuperSite and is specially designed for Resellers. With this tool, you can now place orders for your Customers in 3 simple steps.

1 SELECT PRODUCT: Web Hosting (Linux)

Type domain to link the order with

exampledomain.com

Server Location US IN UK

Choose a plan

Purchase process

Business	5 Domains Unlimited Disk Space Unlimited Bandwidth Unlimited Email Accounts	3 Months ▾	\$ 20.07 Cost: \$ 16.71	Added
Pro	10 Domains Unlimited Disk Space Unlimited Bandwidth Unlimited Email Accounts	3 Months ▾	\$ 27.39 Cost: \$ 22.83	Add

Sub-total \$ 20.07

Discount % ▾

Total \$ 20.07

Your balance: \$ 0.83

[Add funds](#) | [Refresh Balance](#)

Keep the Invoice – if you wish to remind your customer that he/she needs to pay you

Cancel the Invoice– if you have already received payment or you are purchasing it for yourself.

2 ENTER CUSTOMER DETAILS

Add New Domain | Add New Subdomain | Add New Domain Alias

You can choose to host a website on the server, to set up web forwarding to another site, or just set up a domain DNS zone if you want to have only email addresses under this domain.

Domain name *
The website's Internet address like example.com.

DNS Settings

DNS server associates the domain name with a website, mail server, or other services offered with this subscription. If you select the recommended option, we will apply typical DNS settings, and the services will become available under the domain name shortly after you perform minor amendments at your domain name registrar's site. [Learn More.](#)

DNS server configuration

- Use our DNS settings (Recommended)
To make a domain name resolve to your IP address, modify the DNS zone at the domain name registrar's site.
- Use DNS settings of a remote name server but keep them in Panel as well
For advanced users; this option is best if the zone is already served by a remote master name server and you want Panel to act as a secondary name server for the zone.
- Use DNS settings of a remote name server
For advanced users; this option is best if the zone is already served by third-party name servers. In this case, Panel will not keep your DNS zone as there is no necessity in this.

Hosting Type

Hosting type defines how the domain is used.

Hosting type

- Website hosting
Host a website on this server.
- Forwarding
Redirect visitors to another website.
- No hosting
Do not host a website at the moment, only set up the DNS service for serving the domain name. This allows setting up hosting service later or use this domain name for email hosting.

Hosting Settings

Document root *
The path to the website home directory.

Preferred domain
Regardless of the domain's URL that visitors specify in a browser (with the www prefix or without it), a page with the preferred domain's URL opens. The HTTP 301 code is used for such a redirection. The 'None' value means that no redirection is performed.

Here, you would find the list of Name Servers you need to set for your domain name

Point your Domain Name to your Hosting package using one of the options below.

Option 1: Configure your Domain Name to use our Name Servers (Recommended):

- ns1.bh-2.webhostbox.net
- ns2.bh-2.webhostbox.net

OR

Option 2: Add the following records to your Domain Name's existing Name Servers

mukhtadir.in	IN	A	208.91.198.106
*.mukhtadir.in	IN	A	208.91.198.106
www.mukhtadir.in	IN	A	208.91.198.106
mukhtadir.in	IN	MX	mukhtadir.in

Alternatively, if you wish to retain the Name Servers of your domain name instead of using ResellerClub's Name Servers, you would need to add the DNS Records listed on this page, on your existing Name Servers.

That's It!

You are now all set to Kick-Start your **Web Hosting Business**
